Deployment Guide

1. **Database Scripts execution [Setups & Configuration Scripts]**
2. **Take back up of home remit application.**
3. **Copy home remit folder from UAT to live server.**
4. **Copy RHAPI module from UAT to live server. (First time deployment)**
5. **Kindly copy PULL service folder from C: Drive (First time deployment)**

   C:\Program Files\SHMA (Copy all the files present in pull folder to production system**)**

6. **Configuration at Pull Service**

   In the **"APIPullWindowsService.exe.config"** change the DSN.(this is the configuration file kindly change the **DSN** in that file).

   In the **"APIPullWindowsService.exe.config"** fix the following values:

   ```
   <add key="ProxyIP" value="http://PROXY02:7080" />
   <add key="ProxyUser" value="Naveen.Anwar" />
   <add key="Domain" value="SHMA" />
   <add key="ProxyPassword" value="123678" />
   ```

   Note: The above mentioned values are already present in the config file, just fix the following values according to the domain.

7. **Provide local service and network rights to pull service folder.**
8. **Installation of Pull Window Service.**

   Please execute the following command in the run option: cmd.exe.

   Now, with cd command go to the folder dir mentioned where the pull folder is kept: (cd will change directory, cd.. moved to previous one)

   For eg: **C:\Program Files\SHMA\PullEngineService**

   Also put command, **InstallUtil.exe** and press enter. Windows Service will be installed Service Name will be: "**ServicePull".**

   In the Run Type "**services.msc**" right click on the name of "**ServicePull**" and start the service.

9. Reset IIS.
