Mechanism:..... 3

JSBL - Remit Home- FS –SMS incorporation

Mechanism:

1. Currently JSBL is using its own SMS mechanism. The same mechanism will be used by them and SMS will not be send by Remit application.
2. SMS incorporation will be dependent on JSBL provided information like database, DSN, table format etc.
3. As per requested by JSBL what Remit application will do is that it will insert SMS call in JSBL provided database' table.
4. SMS incorporation will be done on transaction types that are utilized over different events like File downloading, COTC payment, Own bank transfer etc.
5. For all the transaction types with which SMS insertion will be set to Yes, remit application will call the JSBL provided table through JSBL provided DSN and if available then will insert the data in that particular table.
6. Remit application job will be just to enter/insert data; hence mechanism like re-send, status management will not be in-place and are not required by JSBL as well.
7. In-case if table is not accessible then such transaction will be inserted in a new table at remit application. These transactions will be available at a newly developed interface and user will have the facility to re-send/insert them from there in JSBL table.
8. SMS messages against transaction types will be configurable as user may change these messages in future.
9. Inquiries/reports if needed then should be made part of this FSD/RS with proper columns and formats.
